Application No.: 10/767,167 Response under 37 CFR §1.116

Art Unit: 2891

Attorney Docket No.: 042054

AMENDMENTS TO THE CLAIMS

Listing of claims:

This listing of claims replaces all prior versions and listings of claims in the application.

Claim 1 (Currently Amended): An integrated circuit comprising a fine vacuum tube

element and other electronic elements integrated and formed on a substrate of a semiconductor,

the fine vacuum tube element and the other electronic elements transmitting signals to and from

each other;

wherein an interference system is constructed and an A/D converter is constructed.

Claim 2 (Original): The integrated circuit as claimed in claim 1, wherein when integrating

the vacuum tube element with the other electronic elements, a quantum effect is realized in a

room temperature environment by utilizing ballistic electrons (non-scattering electrons) traveling

through the vacuum.

Claim 3 (Canceled)

Claim 4 (Previously Presented): The integrated circuit as claimed in claim 1 or 2, wherein

an interference system is constructed and weighting of the interference system is constituted for

image processing and signal code conversion to realize an advanced function-integrated type.

Response under 37 CFR §1.116 Attorney Docket No.: 042054

Application No.: 10/767,167

Art Unit: 2891

Claim 5 (Original): The integrated circuit as claimed in claim 1 or 2, wherein a very

high-speed light-receiving integrated circuit for optical communication is constructed by utilizing

a very high-speed optical response characteristic of electron emission of the vacuum element.

Claim 6 (Original): The integrated circuit as claimed in claim 1 or 2, wherein a sensor

such as a magnetic/electric field sensor is constructed by utilizing a quantum effect of

ballistically traveling electrons.

Claim 7 (Previously Presented): The integrated circuit as claimed in claim 1 or 2, wherein

a thermionic cathode is used as a cathode of the vacuum element.

Claim 8 (Original): The integrated circuit as claimed in claim 7, wherein LaB6

(lanthanum hexaboride) or carbon nanotube is attached to the thermionic cathode.

Claim 9 (Currently Amended): The integrated circuit according to claim [[3]] 1, wherein

the interference system is a Mach-Zehnder interferometer.

Claim 10 (Previously Presented): The integrated circuit according to claim 4, wherein

the interference system is a Mach-Zehnder interferometer.

Claim 11 (Previously Presented): The integrated circuit device according to claim 1,

wherein the other electronic elements are solid state devices.
